

AMENDMENT(S) TO THE SPECIFICATION

15 Please substitute the following paragraph for the paragraph beginning on page 4, line 10:

Electrical distribution harness 14 includes electrical connector 24 and at least one channel 26 extending from and electrically connected, via conductors 28, with electrical connector 24.

The number of conductors 28 can vary from application to application, but will generally include ground, neutral and line conductors, or some combination and/or multiples thereof. Isolated

5 circuit conductors and/or isolated grounds can be included. Conductors 28 electrically interconnect terminals 29 in electrical connector 24 with corresponding terminals in end connectors 32. End connectors 32 are typically connected to a source of electrical power, another electrical distribution harness and/or a jumper cable (all not shown). At least one electrical receptacle 30 is connected to electrical connector 24. In the embodiment shown, four electrical
10 receptacles 30 can be connected to electrical connector 24 with two electrical receptacles 30 on each side of electrical distribution harness 14 although only two electrical receptacles 30 are shown. At least one receptacle mounting bracket 34 has a cutout 36 at least partially surrounding electrical receptacle 30. Receptacle mounting bracket 34 has at least one attachment element 38 connected to modular wall panel 12 (at holder 18 for example) and/or to at least one channel 26.
